

How one Fortune 500 healthcare provider saw 35% cost savings with migration to Amazon Web Services

Challenge

This healthcare company that provides managed health care services to more than 4.6 million members nationwide was looking to migrate from an on-premise Peoplesoft application model to a fully hosted SaaS-like application model to drive improved cost savings and managed services.

Solution

The client engaged WorkStream Technology to migrate their PeopleSoft Finance system from on-premise to Amazon Web Services. WorkStream managed all aspects of the migration, including business process changes and technical and infrastructure design.

Results

As a result of this successful migration, the internal team was able to eliminate 4 infrastructure support roles and outsource all PSFT administration to WorkStream.
